

User Manual

v1.0

(Team - Code Warriors)

Introduction:

In the event- Optimus Hackathon, team Code Warriors opted for the task of creating Mobile Web App for upload/download of files from PC.

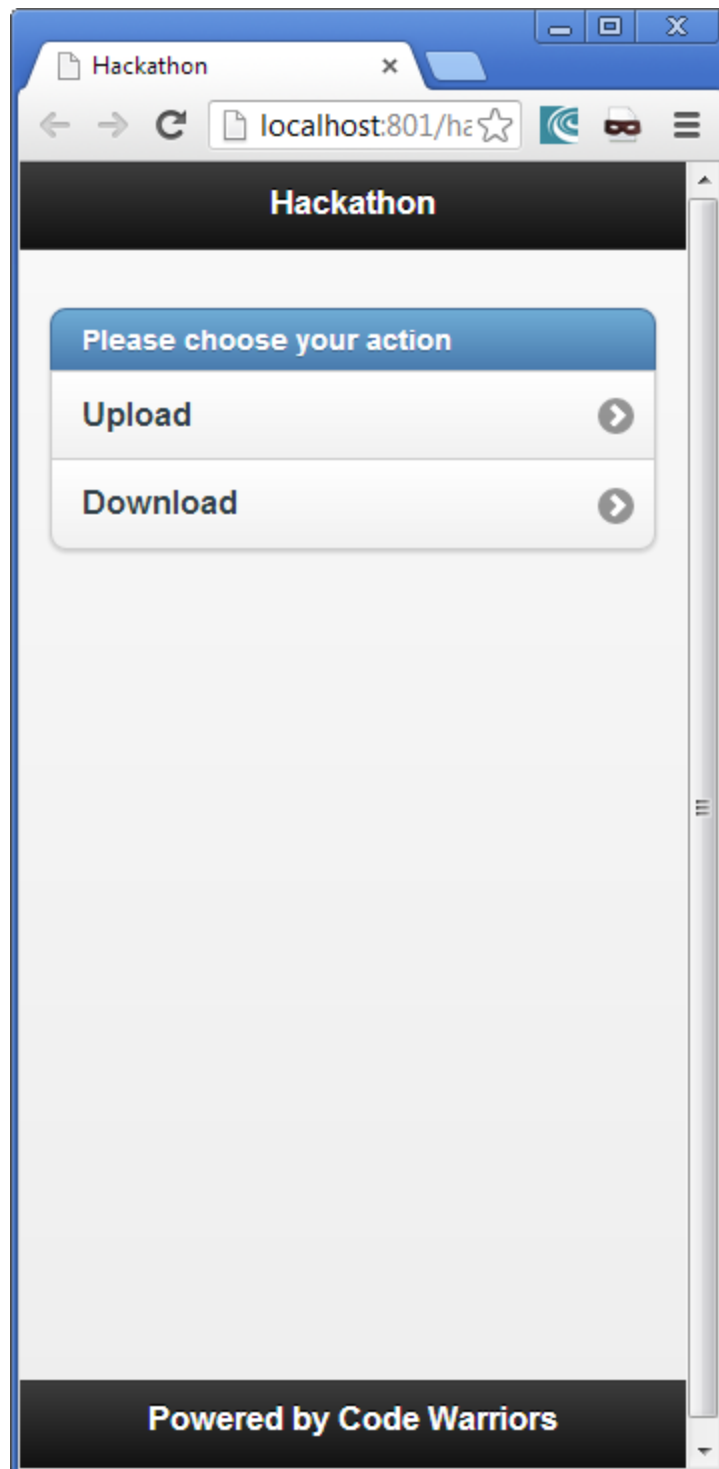

Configuration:

Please follow the steps provided in the document - "Setup and Configuration" to correctly configure the Remote Viewer in the server PC.

Usage:

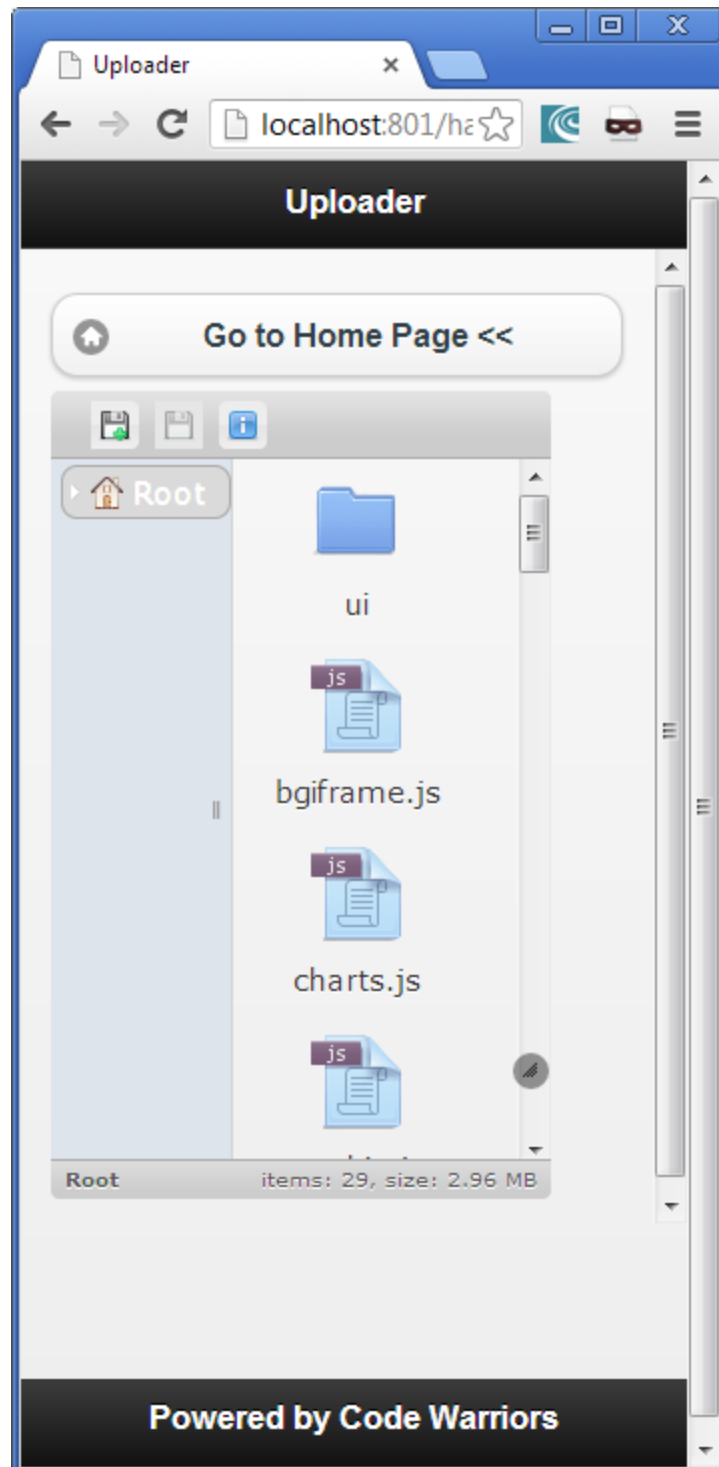

Home Screen

When the user opens the web app, user will view the following screen on mobile browser.

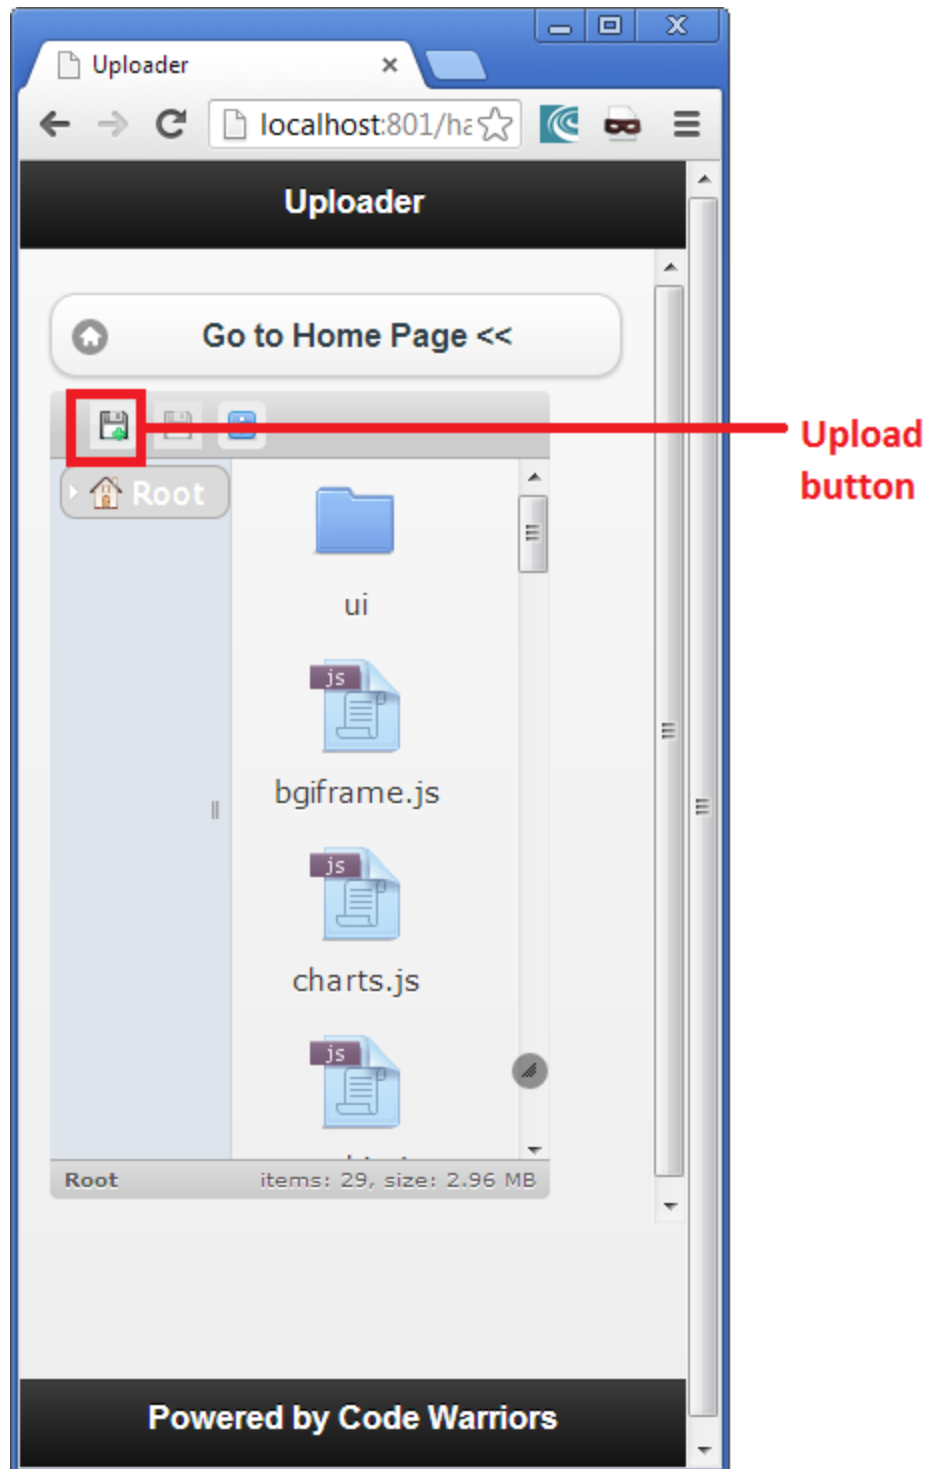

Upload

On the home screen, tap on Upload button to move to Upload screen. Following screen will not be visible with a remote viewer showing server system's files of configured folder.

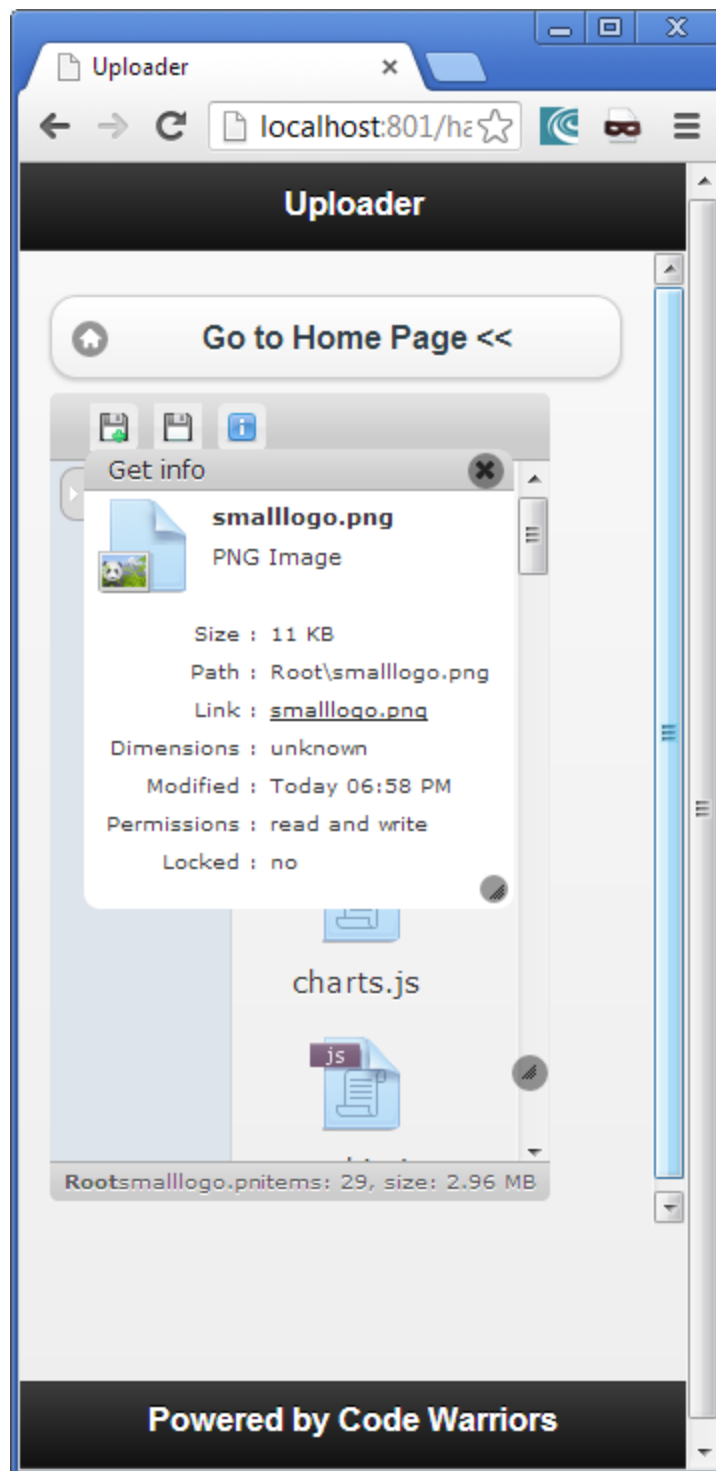

User can tap on upload icon as shown in the below snapshot and choose file to upload

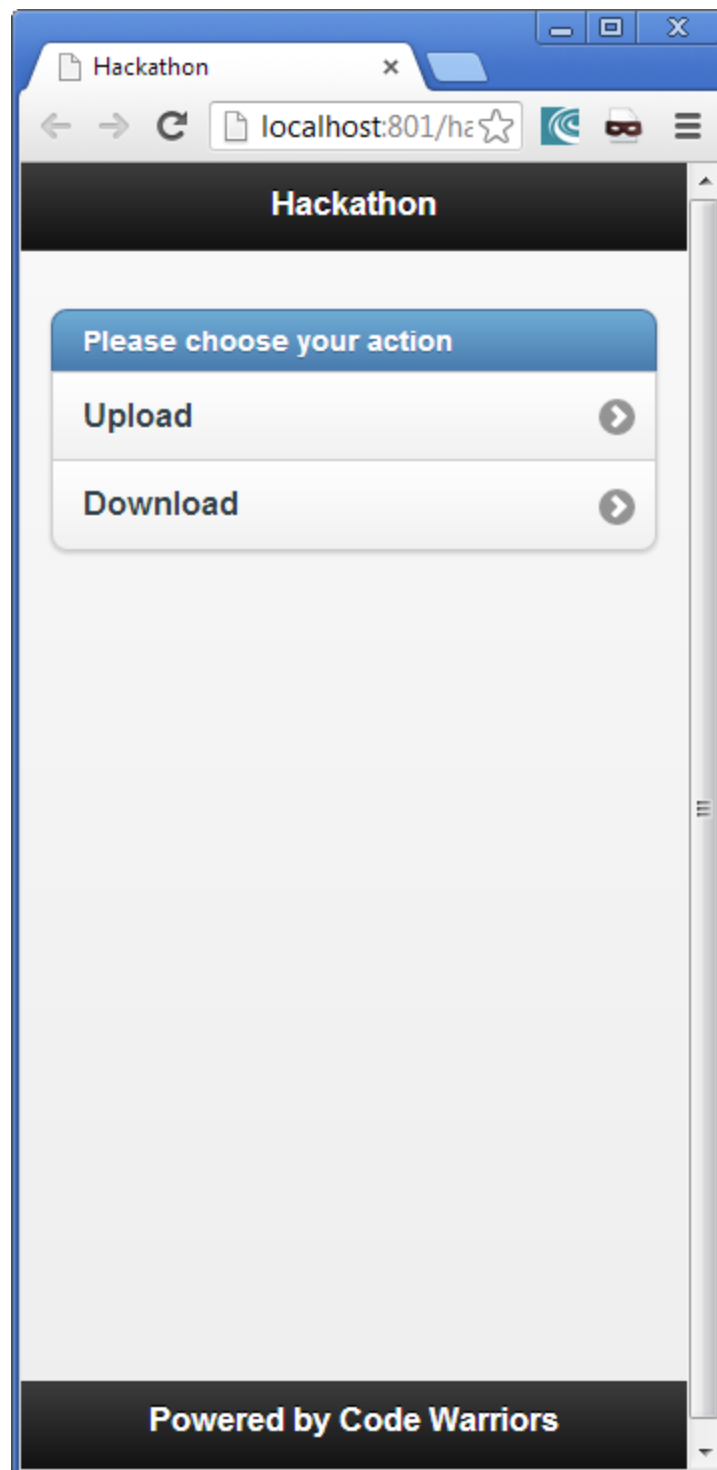

After uploading the file, following screen will popup that displays the summary information of file

uploaded. Please click on X icon to close the popup.

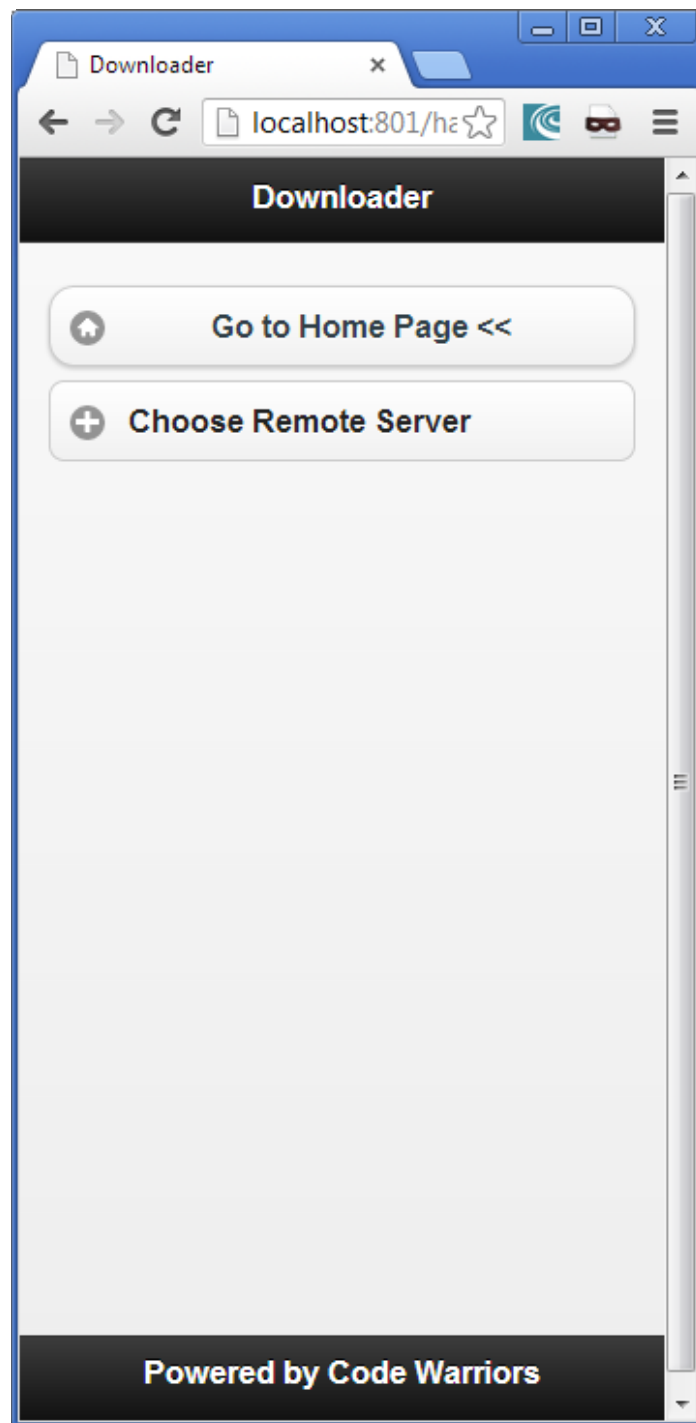

Download

On the home screen

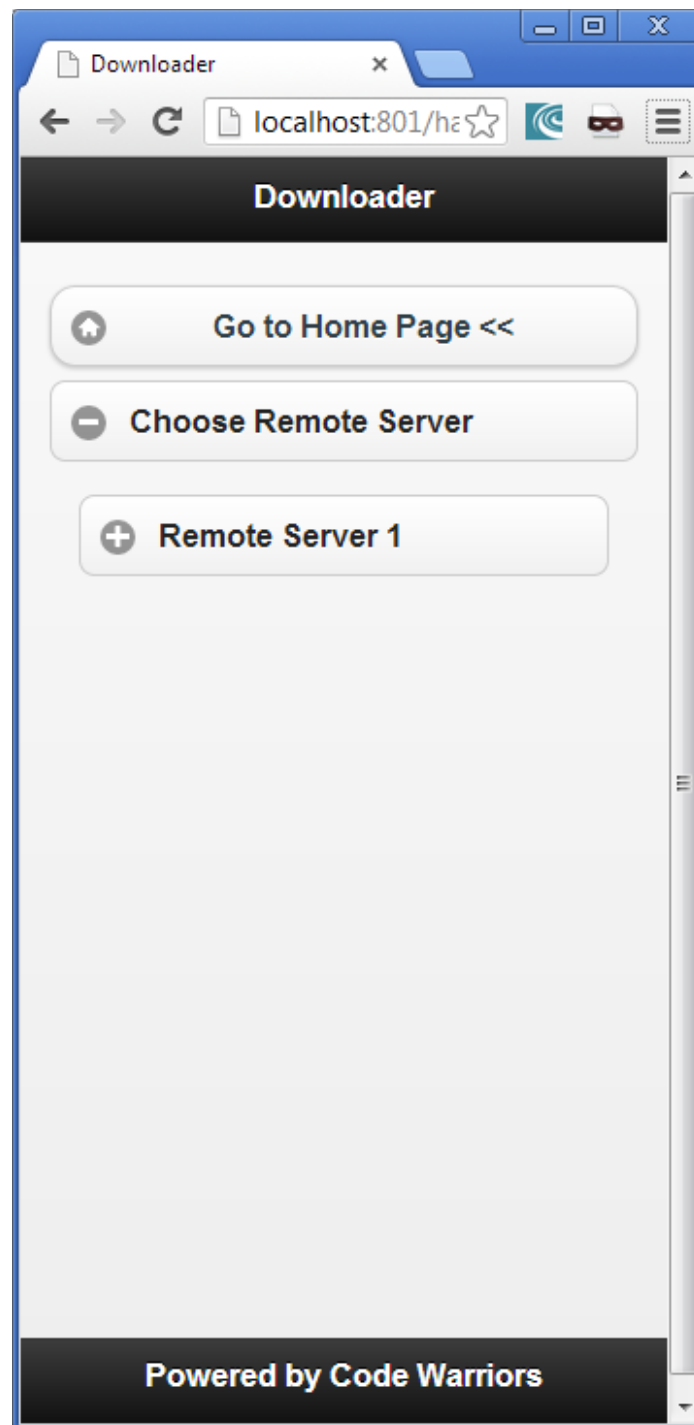

tap on Download button to view Download screen.

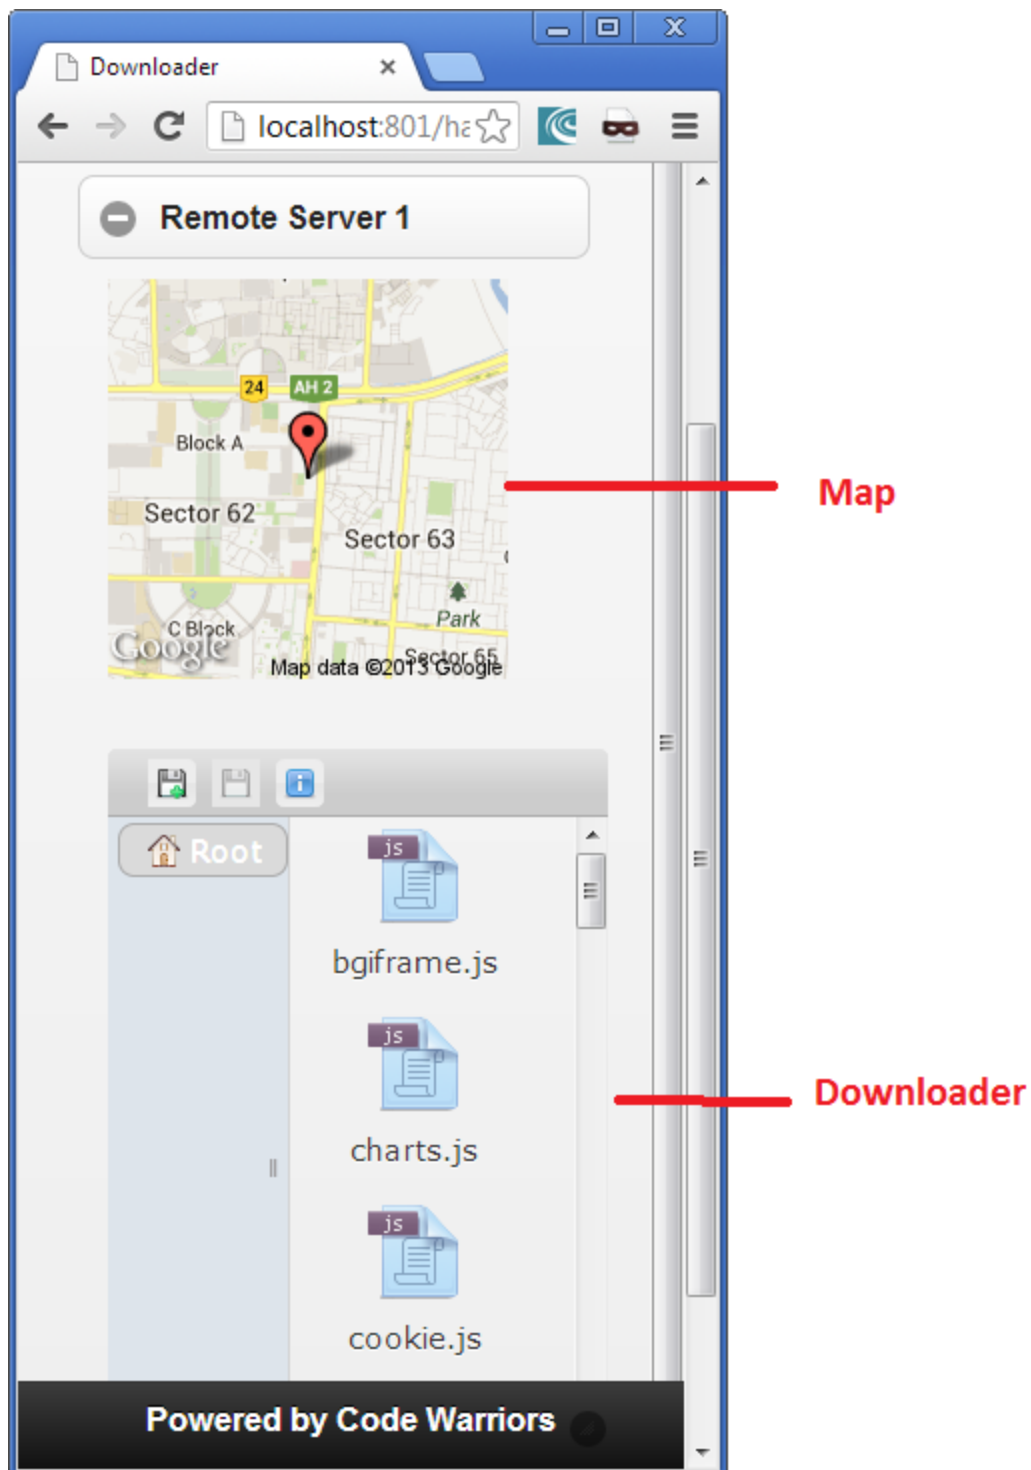

Tap on choose remote server to view the configured server.

Tap on Remote Server to view it in detailed view.

Next screen will display the map showing configured location of server. Please note that it is currently hardcoded to Pinnacle Towers, Sector 63, Noida. Although it is configurable in code. Below it, is the downloader dialog.

Choose any file to view its details and close the dialog. After closing the dialog tap on download

button and save it in mobile.
