    http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=1771

Build Deployment
1. Build the project solution.
2. Publish **elFinder.MVCTest.csproj**
3. Create a folder under the IIS folder (i.e. C:\Inetpub\wwwroot\) with the name OptimusHackathon or the appropriate name for the Optimus Hackathon application deployment as per your requirement.
4. Copy the published build (complete content).
5. Open IIS 7
6. Create a virtual directory under default website with the suitable name and give the path of **OptimusHackathon** folder.

Config Changes
1. To download the file from the application create a folder in c drive named "js". This is considered as a shared folder that is remotely accessible for upload and

download.
2. Put some sample data in this folder.
